Trends in Sexually Transmitted Infections, Dallas County, 2010

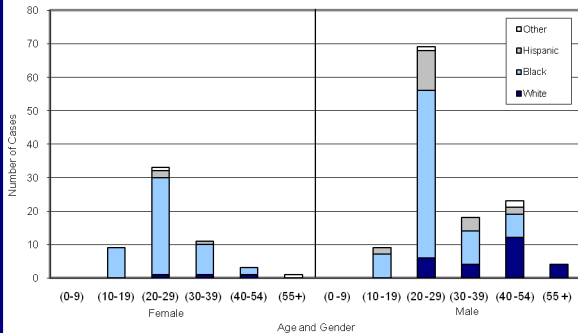

- Chlamydia continues to be the most commonly reported infectious disease in Dallas County, with highest case rates in young females.
- Chlamydia rates have increased since 2006. Expanded screening efforts and the more widespread use of newer, more sensitive diagnostic tests for the infection in Dallas County may have contributed to the increases seen in recent years.
- The majority of chlamydia and gonorrhea infections occur among 15 to 24-year-olds.
- Rates of primary and secondary syphilis decreased in 2010.
