

The 2010-2011 **flu vaccine**

What you need to know

NO MORE PRIORITY GROUPS.

An annual dose of the flu vaccine is recommended for almost everyone except children younger than 6 months old and people who have severe allergies to eggs.

NO MORE SEPARATE FLU VACCINES.

The all-in-one vaccine available this year protects you against H1N1 and two seasonal flu strains.

SOME CHILDREN MAY NEED 2 DOSES.

Dosage for children under the age of 9 years old will depend on how the child was immunized in past flu seasons.
