

FOR IMMEDIATE RELEASE October 15, 2020

Dallas County Reports 581 New Positive 2019 Novel Coronavirus (COVID-19) Cases 589 Total Cases Reported Today Including 8 Older Cases and 52 Probable Cases

DALLAS -- As of 1:00 pm October 15, 2020, Dallas County Health and Human Services is reporting 589 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County for a cumulative total of 88,372 confirmed cases (PCR test), including 1,059 confirmed deaths. There are 52 additional probable cases (antigen test) to report today for a total of 4,476 probable cases including 13 probable deaths. Of the 537 new confirmed cases we are reporting today, 324 came through the Texas Department of State Health Services' (DSHS) electronic laboratory reporting (ELR) system, and 8 are from older months. Please see a provisional breakdown below of these newly reported cases by date of collection:

Month	# of positive patients
May	2
June	3
September	3
October	316

The additional death being reported today includes the following:

 A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital, and had underlying high risk health conditions.

The provisional 7-day average daily new confirmed and probable cases (by date of test collection) for CDC week 40 was 374, an *increase* from the previous daily average of 346 for CDC week 37. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high with 10.0% of symptomatic patients presenting to area hospitals testing positive in week 40 (week ending 10/3/20). A provisional total of 283 confirmed and probable COVID-19 cases were diagnosed in school-aged children (5 to 17 years) during CDC week 40, an increase from the previous week in this age group.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. Of the total confirmed deaths reported to date, about 24% have been associated with long-term care facilities. New cases are being reported as a daily aggregate, with a more detailed summary report updated Tuesdays and Fridays.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 376 COVID-19 patients in acute care in Dallas County for the period ending on Wednesday, October 14. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 472 for the 24 hour period ending on Wednesday, October 14, which represents around 18 percent of all

emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. You can find additional information on risk-level monitoring data <u>here</u>.

"Today we're reporting a total of 589 cases, 581 of which are new, including 52 positive antigen tests which are coded as 'probable.' For ease of understanding the numbers, antigen tests are coded as probable and PCR tests are coded as confirmed. Please note that we have moved back into the 'Red' in our color-coded chart/COVID-19 risk for extreme caution and staying safe and staying home whenever possible.

It's critical with the uptick and the increases that we've seen in our hospitals, including a doubling of COVID-19 cases in hospitals over the last month for our region, that we all make good choices to turn the tide and get our numbers going in a good direction again. We are on the beginning of a second wave of COVID-19 cases if we do not modify behavior, and with talk of bars opening and increased capacity in other commercial buildings, there is a false sense of security. Given that our numbers are going in the wrong direction, we must turn things around now.

Wear your mask, maintain six-foot distance, wash your hands and avoid large crowds. For a complete list of recommendations under 'Red' on the color-coded chart, go to <u>www.DallasCountyCOVID.org</u>. It's up to all of us to flatten the curve and we must do that now, during a time when our weather is pleasant. If we are at a high number going into the cold months of winter when everyone is indoors, we will have a very bad winter and spring for COVID-19," said Dallas County Judge Clay Jenkins.

All Dallas County COVID-19 Updates and Information can be found here:

Specific Guidance for the Public:

- Dallas County COVID-19 Related Health Guidance for the Public
- Dallas County Measures for Protecting An Institution's Workforce from COVID-19 Infection: <u>Employer/Employee Guidance</u>
- Dallas County Guidance for Individuals at High-Risk for Severe COVID-19

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don't live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.

- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
