

FOR IMMEDIATE RELEASE

January 20, 2021

Dallas County Reports 3,469 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 30 Deaths, Including 272 Probable Cases

DALLAS -- As of 1:00 pm January 20, 2021, Dallas County Health and Human Services is reporting 3,469 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 3,197 confirmed cases and 272 probable cases. There is a cumulative total of 212,188 confirmed cases (PCR test). There is a cumulative total of 27,495 probable cases (antigen test). A total of 1,917 Dallas County residents have lost their lives due to COVID-19 illness.

Dallas County Health and Human Services is providing initial vaccinations to those most at risk of exposure to COVID-19. As of this morning, 14,850 doses of COVID-19 vaccine have been administered at the Fair Park mega-vaccine clinic, which started operations on Monday, January 11. With the additional allotment from the State of Texas for Week 6, there are a little over 3,000 doses remaining for the week.

The additional deaths being reported today include the following:

- A woman in her 50's who was a resident of the City of Garland. She had been critically ill and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Mesquite. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Rowlett. He was critically ill in an area hospital.
- A woman in her 60's who was a resident of the City of Glenn Heights. She expired in hospice and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He expired in hospice and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Garland. She was hospitalized.
- A man in his 60's who was a resident of the City of Wilmer. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Garland. She had been hospitalized and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Rowlett. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Garland. He had been critically ill in an area hospital.
- A woman in her 70's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70's who was a resident of a long-term care facility in the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.

- A man in his 70’s who was a resident of a long-term care facility in the City of Mesquite. He had been hospitalized and had underlying high risk health conditions.
- A man in his 70’s who was a resident of the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A man in his 70’s who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70’s who was a resident of the City of Richardson. She expired in hospice and had underlying high risk health conditions.
- A man in his 70’s who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70’s who was a resident of the City of Rowlett. She had been hospitalized.
- A woman in her 70’s who was a resident of a long-term care facility in the City of Richardson. She had been hospitalized and had underlying high risk health conditions.
- A man in his 80’s who was a resident of the City of Grand Prairie. He had been critically ill and had underlying high risk health conditions.
- A woman in her 80’s who was a resident of the City of Cedar Hill. She had been hospitalized and had underlying high risk health conditions.
- A man in his 80’s who was a resident of the City of Farmers Branch. He had been hospitalized and had underlying high risk health conditions.
- A woman in her 80’s who was a resident of a long-term care facility in the City of Mesquite. She had been hospitalized and had underlying high risk health conditions.
- A woman in her 80’s who was a resident of the City of Garland. She was hospitalized and had underlying high risk health conditions.
- A man in his 80’s who was a resident of the City of Irving. He expired in hospice and had underlying high risk health conditions.
- A man in his 80’s who was a resident of a long-term care facility in the City of Mesquite. He had expired in the facility and had underlying high risk health conditions
- A man in his 80’s who was a resident of the City of Dallas. He expired in hospice care and had underlying high risk health conditions.
- A woman in her 90’s who was a resident of a long-term care facility in the City of Dallas. She expired in an area hospital ED and had underlying high risk health conditions.
- A woman in her 90’s who was a resident of a long-term care facility in the City of Mesquite. She had been critically ill in an area hospital and had underlying high risk health conditions.

The first case of the SARS-CoV-2 variant B.1.1.7 has been identified in a resident of Dallas County, who did not have recent travel outside of the US. The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 1 was **2,612**, which is a rate of **99.1** daily new cases per 100,000 residents—the highest case rate in Dallas County since the beginning of the pandemic. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with **31.5%** of symptomatic patients presenting to area hospitals testing positive in week 1 (week ending 1/9/21).

Over the past 30 days, there have been 7,310 COVID-19 cases in school-aged children and staff reported from 674 separate K-12 schools in Dallas County, with 1,842 of these cases reported during the last week of December. One COVID-19 outbreak in a school in December originated with spread among 11 staff members, with transmission to 10 students, and subsequent additional SARS-CoV-2 infections documented among at least 13 household members of these students and staff. One death and one hospitalization occurred from this outbreak.

There are currently 114 active long-term care facility outbreaks. This is the highest number of long-term care facilities with active outbreaks reported in Dallas County since the beginning of the pandemic. A total of 3,453 residents and 1,982 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 717 have been hospitalized and 386 have died. About 22% of all deaths reported to date have

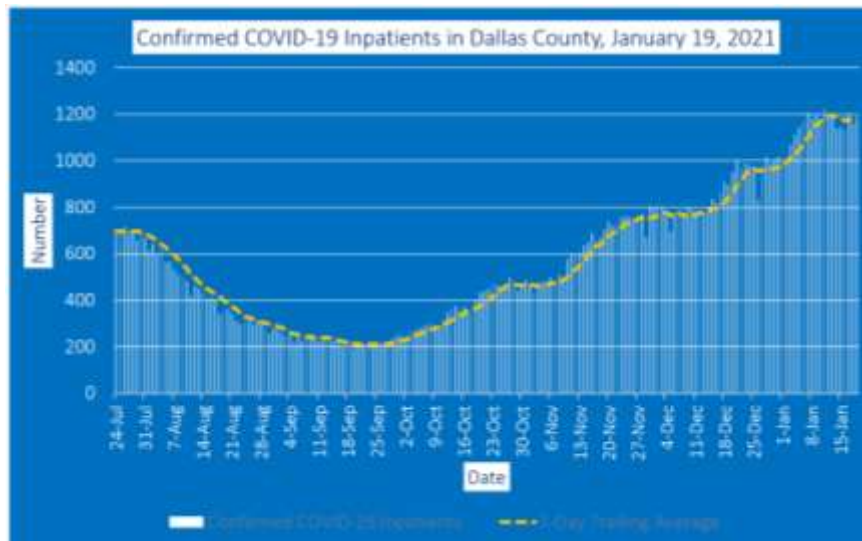

been associated with long-term care facilities. Thirty-six outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days associated with 93 cases.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings are available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 1,187 COVID-19 patients in acute care in Dallas County for the period ending on Tuesday, January 19. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 522 for the same time-period, which represents around 20 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. While we have seen minor fluctuations, we remain close to record highs. Updated UTSW modeling predicts hospitalization could reach 1,440 by January 29, with cases remaining high at 2,700/day by the same date. While these projections reflect slight improvement, the hospitalization number would still overwhelm our capacity should it reach the projected high. You can find additional information on risk-level monitoring data [here](#).

On December 3, Trauma Service Area E (TSA E), which includes Dallas County and the greater Dallas-Fort Worth Metroplex, reached seven consecutive days where the percentage of COVID-19 confirmed patients in regional hospitals, as a percentage of available hospital beds, exceeded 15 percent. According to Governor Abbott's Executive Order GA-32 (GA-32), this makes TSA E an area with high hospitalizations and certain occupancy reductions are automatically triggered by reaching this threshold.

“Today we report 3,469 new COVID cases, which is the second highest one-day number we’ve reported to date. We also are announcing an additional 30 deaths, ranging in ages from individuals in their 50’s to their 90’s. While these are concerning numbers, and I hope the number of new cases and deaths decreases very soon, I am thankful we’ve been able to vaccinate almost 15,000 individuals at the Fair Park mega-vaccine clinic since last week, with thousands of more scheduled for today. As of this morning, we had about 3,000 doses left for the week. While we wait for vaccine distribution to continue to ramp up, we must not forget the prevention measures we know that work: wear your mask, wash your hands, and avoid crowds,” said Dallas County Judge Clay Jenkins.

All Dallas County COVID-19 Updates and Information can be found here:

- [Dallas County Guidance for Individuals at High-Risk for Severe COVID-19](#)

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don't live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
