

FOR IMMEDIATE RELEASE

February 10, 2021

Dallas County Reports 1,231 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 37 Deaths, Including 213 Probable Cases

DALLAS -- As of 2:00 pm February 10, 2021, Dallas County Health and Human Services is reporting 1,231 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 1,018 confirmed cases and 213 probable cases. There is a cumulative total of 237,943 confirmed cases (PCR test). There is a cumulative total of 32,853 probable cases (antigen test). A total of 2,519 Dallas County residents have lost their lives due to COVID-19 illness.

Dallas County Health and Human Services is providing initial vaccinations to those most at risk of exposure to COVID-19 and 42,517 first doses of COVID-19 vaccine have been administered at the Fair Park mega-vaccine clinic, which started operations on Monday, January 11. The remainder of this week's allocations will be for second doses.

The additional deaths being reported today include the following:

- A man in his 20's who was a resident of the City of Dallas. He had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Rowlett. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 50's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She had been hospitalized.
- A man in his 60's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of a group home in the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Rowlett. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Rowlett. She had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.

- A woman in her 60's who was a resident of the City of Garland. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Irving. She had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Garland. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital.
- A woman in her 70's who was a resident of the City of Rowlett. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Dallas. She had been critically ill in an area hospital.
- A man in his 80's who was a resident of the City of Wylie. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Desoto. She had been hospitalized and had underlying high risk health conditions.
- A man in his 80's who was a resident of a long-term care facility in the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 80's who was a resident of a long-term care facility in the City of Lancaster. She had been hospitalized and did not have underlying high risk health conditions.
- A man in his 80's who was a resident of a long-term care facility in the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Irving. He had been hospitalized and did not have underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Irving. He expired in a facility and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Dallas. He expired at home and had underlying high risk health conditions.
- A man in his 90's who was a resident of the City of Desoto. He had been hospitalized and had underlying high risk health conditions.
- A man in his 90's who was a resident of a long-term care facility in the City of Coppell. He expired in hospice and had underlying high risk health conditions.
- A woman in her 90's who was a resident of a long-term care facility in the City of Dallas. She expired in hospice and had underlying high risk health conditions.
- A man in his 90's who was a resident of the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A woman in her 90's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 90's who was a resident of the City of Garland. He had been hospitalized and had underlying high risk health conditions.
- A man in his 90's who was a resident of a long-term care facility in the City of Mesquite. He expired in the facility and had underlying high risk health conditions.
- A woman in her 90's who was a resident of the City of Irving. She had been hospitalized and had underlying high risk health conditions.

Four cases of the SARS-CoV-2 variant B.1.1.7 have been identified in residents of Dallas County who did not have recent travel outside of the US. The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 4 was **1,381**, which is a rate of **52.4** daily new cases per 100,000 residents. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with **24.7%** of symptomatic patients presenting to area hospitals testing positive in week 4 (week ending 1/30/21).

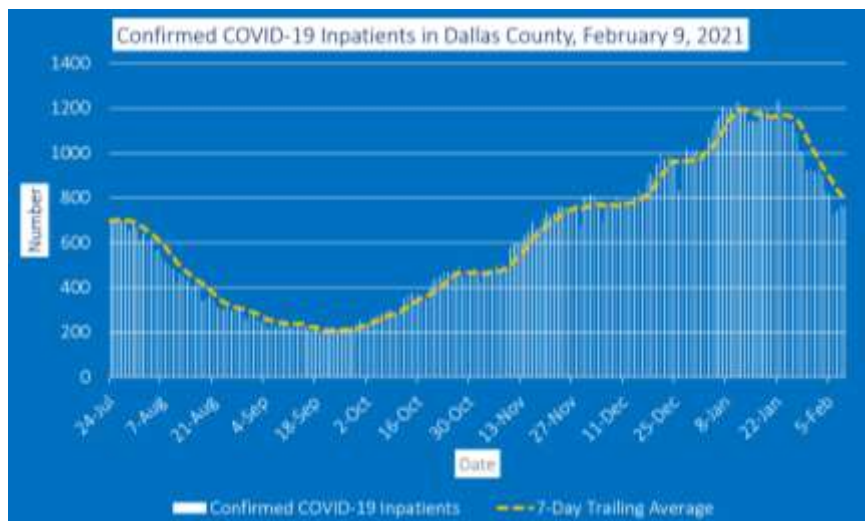

During the past 30 days, there were 7,012 COVID-19 cases in school-aged children and staff reported from 713 separate K-12 schools in Dallas County. A total of 420 children in Dallas County under 18 years of age have been hospitalized since the beginning of the pandemic, including 32 patients diagnosed with Multisystem Inflammatory Syndrome in children (MIS-C). Over 80% of reported MIS-C cases in Dallas have occurred in children who are Hispanic or Latino or Black.

There are currently 103 active long-term care facility outbreaks. A cumulative total of 4,044 residents and 2,263 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 876 have been hospitalized and 513 have died. About 22% of all deaths reported to date have been associated with long-term care facilities. Sixteen outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days. A cumulative total of 383 residents and 191 staff members in congregate-living facilities in Dallas have been diagnosed with COVID-19.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings are available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 761 COVID-19 patients in acute care in Dallas County for the period ending on Tuesday, February 9. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 575 for the same time-period, which represents around 20 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. Updated modeling from UTSW shows hospitalizations between 420-720 by February 19. While we are encouraged by these decreases, COVID hospitalizations are still having a substantial impact on our health care systems. With increasing concern from the variants as well as ongoing high community spread from the original strain, now is not the time to let up. Please continue masking, distancing, and other protective measures, these remain critically important even if you have received COVID-19 vaccination. You can find additional information on risk-level monitoring data [here](#).

On December 3, Trauma Service Area E (TSA E), which includes Dallas County and the greater Dallas-Fort Worth Metroplex, reached seven consecutive days where the percentage of COVID-19 confirmed patients in regional hospitals, as a percentage of available hospital beds, exceeded 15 percent. According to Governor Abbott's Executive Order GA-32 (GA-32), this makes TSA E an area with high hospitalizations and certain occupancy reductions are automatically triggered by reaching this threshold.

“Today we report another 1,231 positive COVID cases and 37 deaths, including a man in his 20’s with no underlying high risk health conditions. We must continue to wear our masks, wash our hands, keep six feet of distance, and avoid crowds at least until we reach herd immunity. These small sacrifices will help protect ourselves, our loved ones, and those in our community from the virus until we reach that point.

We received good news today that our site at Fair Park was selected as a federal mass vaccination site that will begin the week of February 22. Thank you to the Biden Administration for providing these much-needed resources for our community, especially our hard hit areas,” said Dallas County Judge Clay Jenkins.

All Dallas County COVID-19 Updates and Information can be found here:

<https://www.dallascounty.org/covid-19/> and all guidance documents can be found here: <https://www.dallascounty.org/covid-19/guidance-health.php>

Specific Guidance for the Public:

- [Dallas County Measures for Protecting An Institution’s Workforce from COVID-19 Infection: Employer/Employee Guidance](#)
- [Dallas County Guidance for Individuals at High-Risk for Severe COVID-19](#)

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don’t live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-based hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
