February 25, 2021

Dallas County Reports 614 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 24 Deaths, Including 126 Probable Cases

DALLAS -- As of 12:00 pm February 25, 2021 Dallas County Health and Human Services is reporting 614 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 488 confirmed cases and 126 probable cases. There is a cumulative total of 244,335 confirmed cases (PCR test). There is a cumulative total of 34,773 probable cases (antigen test). A total of 2,923 Dallas County residents have lost their lives due to COVID-19 illness.

Dallas County Health and Human Services is providing initial vaccinations to those most at risk of exposure to COVID-19 and 45,643 first doses of COVID-19 vaccine have been administered at the Fair Park mega-vaccine clinic, which started operations on Monday, January 11. Dallas County is currently administering second doses.

The additional deaths being reported today include the following:

- A woman in her 50's who was a resident of the City of Lancaster. She had been hospitalized and did not have underlying high risk health conditions.
- A woman in her 50's who was a resident of the City of Dallas. She had been hospitalized and had underlying high risk health conditions.
- A woman in her 50's who was a resident of the City of Irving. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Richardson. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of a long-term care facility in the City of Lancaster. He expired in an area hospital ED and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She expired in an area hospital ED and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He expired in hospice and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She expired at home and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He was found deceased at home and had underlying high risk health conditions.

- A woman in her 70's who was a resident of a long-term care facility in the City of Mesquite. She expired in an area hospital ED and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Desoto. She had been hospitalized and did not have underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Hutchins. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Duncanville. He expired in hospice and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of a long-term care facility in the City of Dallas. He expired in hospice and had underlying high risk health conditions.
- A woman in her 80's who was a resident of a long-term care facility in the City of Cedar Hill. She had been hospitalized and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of a long-term care facility in the City of Richardson. He expired in a facility and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Irving. She expired at home and had underlying high risk health conditions.
- A man in his 90's who was a resident of the City of Dallas. He expired in a facility and had underlying high risk health conditions.

Four cases of the SARS-CoV-2 variant B.1.1.7 have been identified in residents of Dallas County who did not have recent travel outside of the US. The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 6 was **657**, which is a rate of **24.9** daily new cases per 100,000 residents. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with **19.7%** of symptomatic patients presenting to area hospitals testing positive in week 6 (week ending 2/13/21).

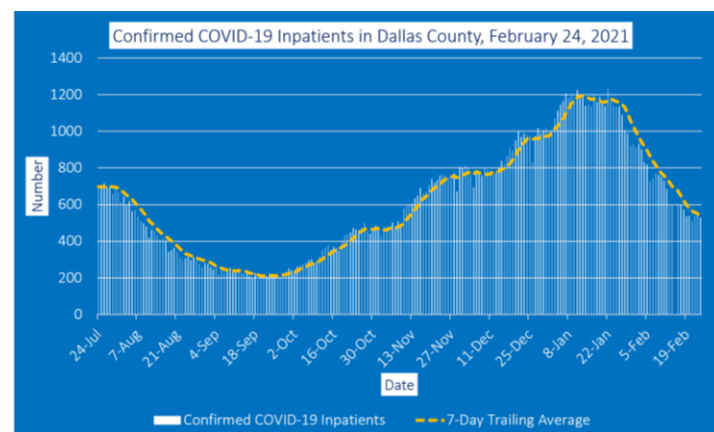

During the past 30 days, there were 3,894 COVID-19 cases in school-aged children and staff reported from 628 separate K-12 schools in Dallas County. One death of a teacher in a Dallas County K-12 school from COVID-19 was confirmed this past week. A total of 466 children in Dallas County under 18 years of age have been hospitalized since the beginning of the pandemic, including 37 patients diagnosed with Multisystem Inflammatory Syndrome in children (MIS-C). Over 80% of reported MIS-C cases in Dallas have occurred in children who are Hispanic or Latino or Black.

There are currently 85 active long-term care facility outbreaks. A cumulative total of 4,170 residents and 2,325 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 932 have been hospitalized and 579 have died. About 22% of all deaths reported to date have been associated with long-term care facilities. Eleven outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days. A cumulative total of 390 residents and 195 staff members in congregate-living facilities in Dallas have been diagnosed with COVID-19.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings are available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators in determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 529 COVID-19 patients in acute care in Dallas County for the period ending

on Wednesday, February 24. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 428 for the same time-period, which represents around 16 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. Updated UTSW forecasting indicates hospitalizations between 420-680 by February 26th and daily case counts of a 1,000. While we have seen a significant decline in hospitalizations, we've stayed mostly level the last few days. Please continue masking, distancing, and other protective measures, as these remain critically important even if you have received COVID-19 vaccination. We remain concerned about the risk of variants and upcoming spring holidays that last year led to substantial spread. Until we have achieved herd immunity, we remain at risk for additional waves. You can find additional information on risk-level monitoring data [here](#).

“Today, we report an additional 24 deaths and additional 614 positive COVID-19 cases. While these case numbers are higher than we've seen in the previous days, you should not be alarmed as all these numbers are artificially low due to the lack of testing in the week of the power outages.

In the coming days, we should get to a more accurate count of COVID positive cases. While that number will be higher than we've seen this week, it will be much lower than what we've seen at our highest. The trends are good and the numbers are moving in the right direction. Our death totals should begin to decline. The number of deaths are a result of the number of COVID positive cases in the previous month. As the numbers of COVID positive cases are trending lower, the number of deaths will also decline.

Operations are running much smoother today at Fair Park as more people are catching up on their second dose and our two teams have now worked almost two days side-by-side.

We all have a role to play in defeating COVID. Your role is to follow the doctors’ advice based on the science and the facts: wear a mask, maintain distance, avoid crowds, and forego get-togethers for the time being. Of equal importance is to register for the vaccine in as many places as you are willing to drive and to get your vaccine as soon as you are eligible. If we do these things, we will defeat COVID and we will reach herd immunity in 2021,” said Dallas County Judge Clay Jenkins.

All Dallas County COVID-19 Updates and Information can be found here:

- [Dallas County Guidance for Individuals at High-Risk for Severe COVID-19](#)

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don’t live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.

- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
