**March 12, 2021**

**Dallas County Reports 401 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 39 Deaths, Including 114 Probable Cases**

**DALLAS** -- As of 12:00 pm March 12, 2021 Dallas County Health and Human Services is reporting 401 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 287 confirmed cases and 114 probable cases. There is a cumulative total of 249,011 confirmed cases (PCR test). There is a cumulative total of 37,073 probable cases (antigen test). A total of 3,275 Dallas County residents have lost their lives due to COVID-19 illness.

Dallas County Health and Human Services (DCHHS) is providing initial vaccinations to those most at risk of exposure to COVID-19 and over 153,000 total doses of COVID-19 vaccine have been administered at the Fair Park mega-vaccine clinic, which started operations on Monday, January 11. At Fair Park, first doses through the Community Vaccination Center and second doses through DCHHS continued through Friday and will resume on Monday.

The additional deaths being reported today include the following:

- A man in his 30's who was a resident of the City of Dallas. He expired in an area hospital Emergency Department and had underlying high risk health conditions.
- A man in his 40's who was a resident of the City of Irving. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 40's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A 44 year old woman who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 40's who was a resident of the City of Dallas. He had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A man in his 40's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Grand Prairie. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Mesquite. She had been critically ill in an area hospital and had underlying high risk health conditions.

- A man in his 60's who was a resident of the City of Irving. He had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A man in his 60's who was a resident of a long-term care facility in the City of Dallas. He expired in the facility and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She expired in hospice and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Irving. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Grand Prairie. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Rowlett. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Mesquite. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Dallas. She had been hospitalized and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Cockrell Hill. He had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Irving. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Seagoville. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of a long-term care facility in the City of Dallas. He expired in the facility and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Irving. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Dallas. He expired in hospice and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Lancaster. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Dallas. He expired in hospice and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Garland. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Dallas. He expired at home and had underlying high risk health conditions.

- A woman in her 90's who was a resident of the City of Dallas. She expired in a facility and had underlying high risk health conditions.
- A woman in her 90's who was a resident of a long-term care facility in the City of Dallas. She expired in the facility and had underlying high risk health conditions.

One case of a B.1.526 variant of SARS-CoV-2 has been newly reported in a resident of Dallas County; this individual did not have a history of travel outside of Dallas County. Nine cases of the SARS-CoV-2 variant B.1.1.7 have been identified in residents of Dallas County. One was hospitalized and five had history of recent domestic travel outside of Texas. The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 8 was **457**, which is a rate of **17.3** daily new cases per 100,000 residents. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with **12.1%** of symptomatic patients presenting to area hospitals testing positive in week 8 (week ending 2/27/21).

During the past 30 days, there were 1,714 COVID-19 cases in school-aged children and staff reported from 504 separate K-12 schools in Dallas County. An additional death of a teacher's assistant in a Dallas County K-12 school from COVID-19 was confirmed this past week.

There are currently 43 active long-term care facility outbreaks. A cumulative total of 4,225 residents and 2,332 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 969 have been hospitalized and 624 have died. About 22% of all deaths reported to date have been associated with long-term care facilities. Eleven outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days. A cumulative total of 402 residents and 203 staff members in congregate-living facilities in Dallas have been diagnosed with COVID-19.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings are available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators in determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 246 COVID-19 patients in acute care in Dallas County for the period ending on Thursday, March 11. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 307 for the same time-period, which represents around 13 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. Please be mindful of following CDC travel guidance over spring break and spring holidays. We remain concerned for additional waves due to a potential rise in variants and because community spread remains high creating an environment for cases to reignite. We encourage everyone to follow public health guidance, continue masking and avoid crowded and non-essential indoor settings. Updated UTSW forecasting indicates hospitalizations between 90-300 and daily case counts of 300 by March 29. You can find additional information on risk-level monitoring data [here](#).

“Today marks the one-year anniversary of my first executive order, the day after the World Health Organization declared COVID-19 a global pandemic. One year later, we report 401 additional cases and 39 additional deaths. Over the past year, we’ve lost 3,275 residents of Dallas County to COVID-19. It’s been a long ordeal but the tide is turning as more and more people are getting vaccinated and the numbers of those that are in the hospital are as low as they’ve been since September. Now is not the time to lose our resolve or shirk from the small acts of patriotism required to keep our country and our community as strong as possible until the vaccine allow us to reach herd immunity. We all have a role to play and your role is to wear your mask when in buildings outside your home, wash your hands frequently, avoid crowds and register for the vaccine in as many places as you’re willing to drive. When it’s your turn, get your vaccine, and together we will defeat COVID,” said Dallas County Judge Clay Jenkins.

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don’t live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
