

FOR IMMEDIATE RELEASE

March 19, 2021

Dallas County Reports 348 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 22 Deaths, Including 144 Probable Cases

DALLAS -- As of 12:00 pm March 19, 2021 Dallas County Health and Human Services is reporting 348 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 204 confirmed cases and 144 probable cases. There is a cumulative total of 250,353 confirmed cases (PCR test). There is a cumulative total of 37,636 probable cases (antigen test). A total of 3,372 Dallas County residents have lost their lives due to COVID-19 illness.

Dallas County Health and Human Services (DCHHS) is providing initial vaccinations to those most at risk of exposure to COVID-19 and over 187,000 total doses of COVID-19 vaccine have been administered at the Fair Park mega-vaccine clinic, which started operations on Monday, January 11. Vaccine operations for both first and second doses at Fair Park will continue through Friday. Second doses only will be administered on Saturday.

The additional deaths being reported today include the following:

- A man in his 20's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 30's who was a resident of the City of Richardson. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Wilmer. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Grand Prairie. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of a long-term care facility in the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She expired in an area hospital ED and had underlying high risk health conditions.
- A woman in her 60's who was a resident of a long-term care facility in the City of Richardson. She had been hospitalized and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.

- A woman in her 70’s who was a resident of a long-term care facility in the City of Mesquite. She expired in the facility and had underlying high risk health conditions.
- A woman in her 70’s who was a resident of the City of Garland. She expired in hospice care and had underlying high risk health conditions.
- A man in his 70’s who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70’s who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80’s who was a resident of a long-term care facility in the City of Dallas. He expired in the facility and had underlying high risk health conditions.
- A woman in her 80’s who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80’s who was a resident of a long-term care facility in the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 90’s who was a resident of the City of Dallas. He expired in an area hospital ED and had underlying high risk health conditions.
- A man in his 90’s who was a resident of a long-term care facility in the City of Dallas. He expired in the facility and had underlying high risk health conditions.
- A woman in her 90’s who was a resident of the City of Dallas. She had been hospitalized and had underlying high risk health conditions.

Three additional cases of SARS-CoV-2 variant B.1.1.7 have been identified in residents of Dallas County. To date, a total of 14 cases of the SARS-CoV-2 variant B.1.1.7 and one case of a B.1.526 variant have been identified in residents of Dallas County. One was hospitalized and five had history of recent domestic travel outside of Texas. The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 9 was **291**, which is a rate of **11.0** daily new cases per 100,000 residents. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with **9.9%** of symptomatic patients presenting to area hospitals testing positive in week 9 (week ending 3/6/21).

During the past 30 days, there were 1,297 COVID-19 cases in school-aged children and staff reported from 425 separate K-12 schools in Dallas County. There are currently 25 active long-term care facility outbreaks. A cumulative total of 4,255 residents and 2,359 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 1,002 have been hospitalized and 656 have died. About 22% of all deaths reported to date have been associated with long-term care facilities. Thirteen outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days. A cumulative total of 429 residents and 207 staff members in congregate-living facilities in Dallas have been diagnosed with COVID-19.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings are available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 207 COVID-19 patients in acute care in Dallas County for the period ending on Thursday, March 18. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 319 for the same time-period, which represents around 14 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. Please be mindful of following CDC travel guidance (<https://www.cdc.gov/coronavirus/2019-ncov/travelers/travel-during-covid19.html>) over spring break and spring holidays. We remain concerned for

additional waves due to a potential rise in variants and because community spread remains high creating an environment for cases to reignite, especially if compliance with personal actions such as masking and distancing decline. We encourage everyone to follow public health guidance, continue masking and avoid crowded and non-essential indoor settings. Updated UTSW forecasting indicates hospitalizations between 150-250 and daily case counts of 460 by April 1. You can find additional information on risk-level monitoring data [here](#).

“Today, we report 348 new COVID-19 positive cases and 22 deaths. It is important that we continue to do things like wear a mask, wash our hands, and avoid crowds that have proven effective. It’s equally important that we register in as many places as we’re willing to drive and get vaccinated as soon as we are eligible.

There has been a change in the scheduling for Fair Park to streamline the process. Moderna will be available from now on only on Monday and Friday with Pfizer on Tuesday, Wednesday and Thursday. There are many reasons for this change but one is that for several weeks, we had no Moderna first doses and so having only a few people coming today for a second dose of Moderna would lead to a possible waste of unused portions of vials.

Our hope is that vaccine production will increase rapidly and we will see more opportunities for shots at Fair Park and our other locations as well as the opportunity to expand to more providers. We all have a role to play and your role is to get registered. You can register for Dallas County at www.Dallascounty.org or visit the Department of State Health Services hub provider list to register with other providers in North Texas: <https://dshs.texas.gov/coronavirus/immunize/vaccine-hubs.aspx>,” said Dallas County Judge Clay Jenkins.

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don’t live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.

- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
