Dallas County Reports 152 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 9 Deaths, Including 83 Probable Cases

DALLAS -- As of 12:00 pm May 25, 2021 Dallas County Health and Human Services is reporting 152 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 69 confirmed cases and 83 probable cases. There is a cumulative total of 260,277 confirmed cases (PCR test). There is a cumulative total of 42,526 probable cases (antigen test). A total of 4,039 Dallas County residents have lost their lives due to COVID-19 illness.

Dallas County Health and Human Services (DCHHS) is providing initial vaccinations to those most at risk of exposure to COVID-19 and over 477,000 total doses of COVID-19 vaccine have been administered at the Fair Park mega-vaccine clinic, which started operations on Monday, January 11. Vaccine operations for both first and second doses continue weekly at Fair Park and the full operating schedule can be found [here](#).

The additional deaths being reported today include the following:

- A man in his 40's who was a resident of the City of Dallas. He expired in an area ED and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of a long-term care facility in the City of Balch Springs. He expired in the facility and had underlying high risk health conditions.
- A woman in her 60's who was a resident of a long-term care facility in the City of Desoto. She expired in a facility and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Garland. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of a long-term care facility in the City of Richardson. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 80's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80's who was a resident of a long-term care facility in the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.

To date, a total of 87 cases with SARS-CoV-2 variants of concern have been identified in residents of Dallas County, including: 69 cases of variant B.1.1.7; seven B.1.429 variants; two B.1.526 variants; six P.1 variants; one P.2 variant, and two B.1.617.2 cases. Five have been hospitalized with 3 requiring intensive care unit admission, and one has died. Eight had history of recent domestic travel outside of Texas. One case of B.1.1.7 is a likely instance of reinfection with COVID-19, occurring over 6 months after an initial PCR-confirmed infection. The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 19 was **141**, which is a rate of **5.3** daily new cases per 100,000 residents. Over the past 2 weeks, rates of new COVID-19 diagnoses in Addison and Balch Springs have been more than 50%

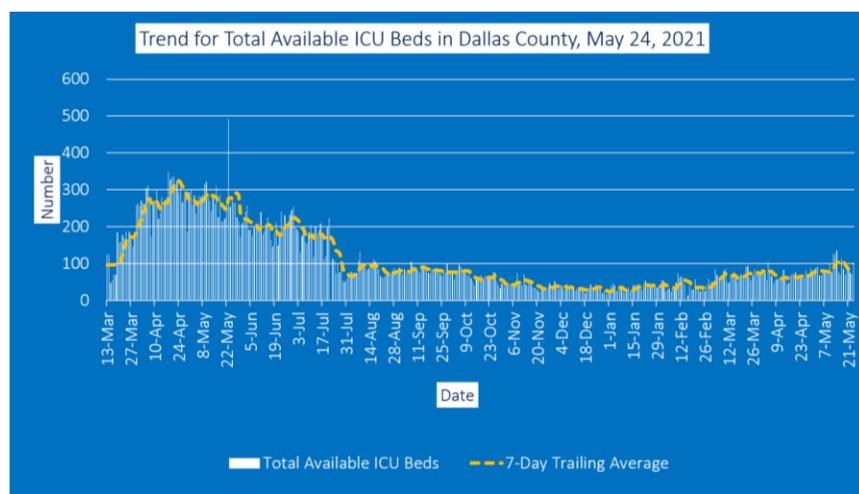

higher than county-wide case rates. Rates of new COVID-19 diagnoses in Cedar Hill, Coppell, and Mesquite have been 30% higher than county-wide case rates. Of symptomatic patients presenting to area hospitals in week 19 (week ending 5/15/21), **6.2%** of respiratory specimens tested positive SARS-CoV-2.

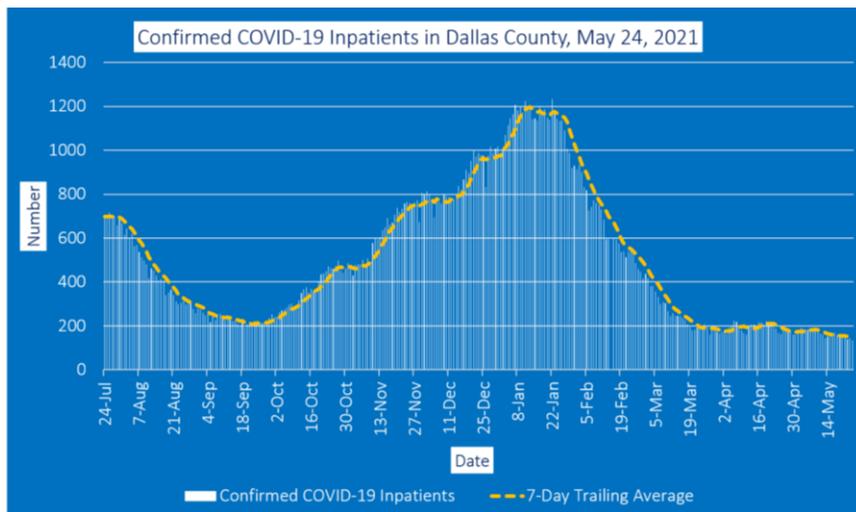

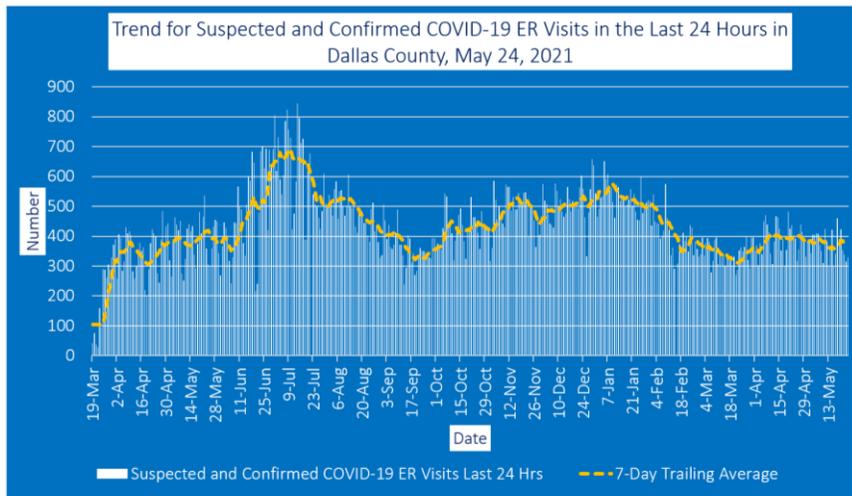

During the past 30 days, there were 1,106 COVID-19 cases in school-aged children and staff reported from 417 separate K-12 schools in Dallas County. During the months of April and May, 20% of all COVID-19 cases diagnosed in Dallas County were in children under the age of 18 years—the highest proportion in this age group since the beginning of the pandemic. To date, 67 children have been hospitalized with diagnoses of multisystem inflammatory syndrome (MIS-C), a rare but serious complication associated with COVID-19 infection. In Dallas County, 571 cases of COVID-19 breakthrough COVID-19 infections in fully vaccinated individuals have been confirmed to date, of which 95 were hospitalized, and 10 have died.

There are currently 22 active long-term care facility outbreaks. A cumulative total of 4,381 residents and 2,473 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 1,105 have been hospitalized and 792 have died. About 20% of all deaths reported to date have been associated with long-term care facilities. Eight outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days. A cumulative total of 635 residents and 223 staff members in congregate-living facilities in Dallas have been diagnosed with COVID-19.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings, available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. The most recent COVID-19 hospitalization data for Dallas County, as reported to the North Central Texas Trauma Regional Advisory Council, can be found at www.dallascounty.org/covid-19 under “Monitoring Data,” and is updated regularly. This data includes information on the total available ICU beds, suspected and confirmed COVID-19 ER visits in the last 24 hours, confirmed COVID-19 inpatients, and COVID-19 deaths by actual date of death. The most recent forecasting from UTSW can be found [here](#).

“Today we report 152 new COVID-19 cases and nine additional deaths. The numbers continue to improve overall but this is due to vaccination. For people who have not yet been vaccinated, the hospitalization and death rate continues to be high. Today, over 300 North Texans are struggling in the hospital with COVID and each day we announce more deaths. There is a false belief that since the numbers are going down due to vaccination that unvaccinated individuals can let their guard down, attend large indoor events, and stop doing the things that kept them protected up until this point. This is not true. For unvaccinated people, the risks are high and you should continue to mask, socially distance, avoid indoor crowds and limit interactions. The vaccine has proven to be safe and extremely effective, and of course the best protection against COVID for you, your community, and your family, is to become vaccinated. If we all work together and do our part, we will defeat COVID,” said Dallas County Judge Clay Jenkins.

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don't live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
