

# Dallas County Health and Human Services 2019 Novel Coronavirus (COVID-19) Summary

July 10, 2020

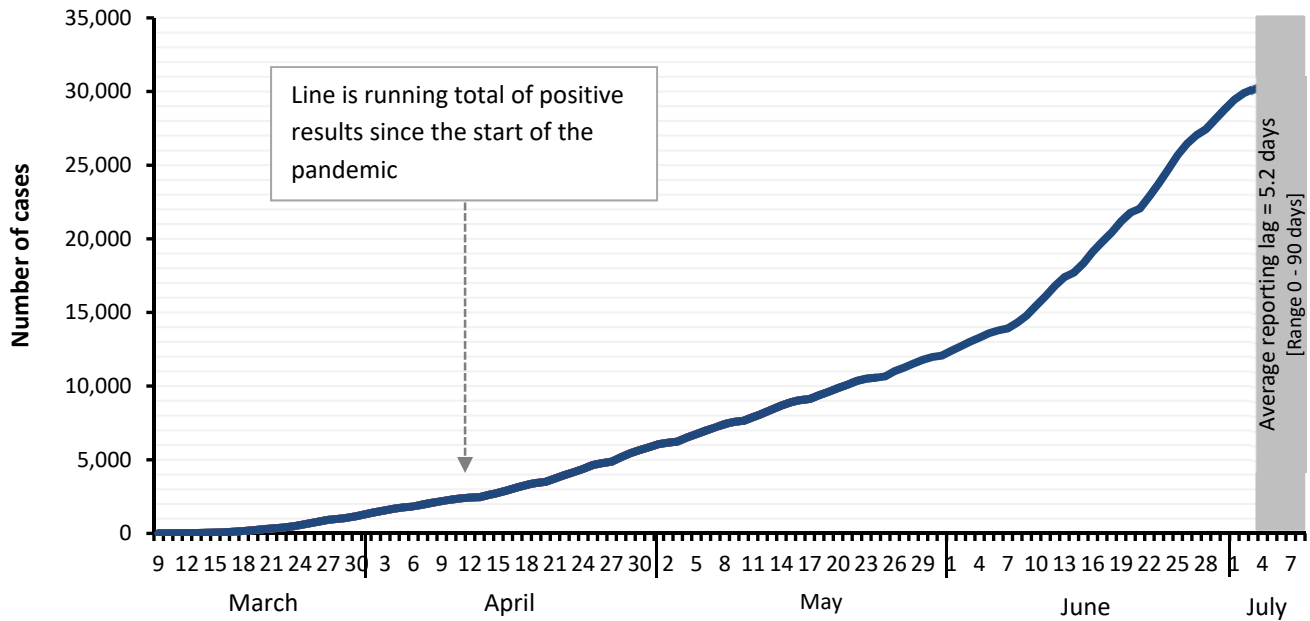

- As of July 10, 2020, DCHHS is reporting 1,164 additional cases of 2019 novel coronavirus (COVID-19), bringing the total case count in Dallas County to 31,525, including 445 deaths.
- An increasing proportion of COVID-19 cases are being diagnosed in young adults between 18 to 40 years of age, such that of all cases reported after June 1<sup>st</sup>, over half have been in this age group.
- The age-adjusted rates of confirmed COVID-19 cases in non-hospitalized patients have been highest among Hispanics (667.4 per 100,000), Asians (187.4 per 100,000) and Blacks (136.4 per 100,000). These rates have been higher than Whites (43.8 per 100,000). Over 60% of overall COVID-19 cases to date have been Hispanic.
- The percentage of respiratory specimens testing positive for SARS-CoV-2 increased to 30.5% among symptomatic patients presenting to area hospitals in week 27.
- Of the 3,536 cases requiring hospitalization to date, over two-thirds (69%) have been under 65 years of age, and over half reported having a chronic health condition. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19.
- Of cases requiring hospitalization who reported employment, over 80% have been critical infrastructure workers, with a broad range of affected occupational sectors, including: healthcare, transportation, food and agriculture, public works, finance, communications, clergy, first responders and other essential functions.
- Thirty-two percent (32%) of deaths have been associated with long-term care facilities.

Figure 1. Daily COVID-19 cases by date of test collection, Dallas County: March 10 – July 10, 2020<sup>1-4</sup>

1. Data received as of 8:00 pm yesterday, for residents of Dallas County tested with known specimen collection dates. This does include delayed results from previous days. All data are preliminary and subject to change as cases continue to be investigated.
2. Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result. The reporting lag is calculated as time from specimen collection to receipt of test results. The average reporting lag is 5.2 days, with a range from 0 – 90 days.
3. The validity of results based on antibody tests is not yet known. This summary report includes only confirmed cases based on PCR test results.
4. Bars are the number of positive PCR tests which were collected that day.
5. Rolling 7-day average is the average number of new confirmed COVID-19 cases collected 7 days prior to value.

1. Data received as of 8:00 pm, June 8, 2020, for residents of Dallas County tested with known specimen collection dates. This does include delayed results from previous days. All data are preliminary and subject to change as cases continue to be investigated.
2. Data on persons who identify as American Indian/Alaska Native, Native Hawaiian/ Pacific Islander, or other race are not shown. Hispanic/Latino includes people of any race.
3. The rate of non-hospitalized and hospitalized cases shows patients not known to have died. The three categories shown are not mutually exclusive.
4. For non-fatal, non-hospitalized data, race/ethnicity data comes from laboratory reports, and laboratories often do not have access to race/ethnicity information.
5. We are including and reporting here all deaths that we are aware of that are laboratory positive or probable COVID-19, not just those with known race and ethnicity.
6. The health department continues to seek ways to improve the completeness of race/ethnicity information, including matching to other known internal and external surveillance databases with timely race/ethnicity data.
