

# Dallas County Health and Human Services 2019 Novel Coronavirus (COVID-19) Summary

July 31, 2020

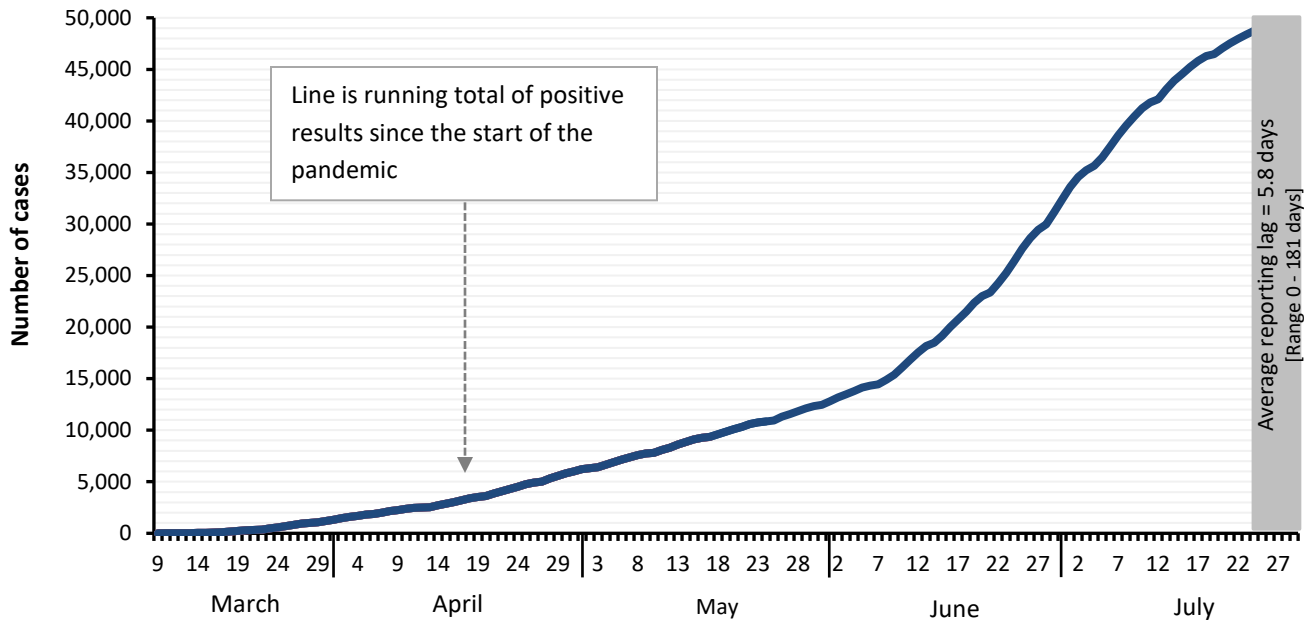

- As of July 31, 2020, DCHHS is reporting 707 additional confirmed cases of 2019 novel coronavirus (COVID-19), bringing the total number of confirmed cases in Dallas County to 49,976, including 671 confirmed deaths.
- Over 2,050 children under 18 years of age have been diagnosed with confirmed COVID-19 since July 1st, including 52 children who have been hospitalized for COVID-19.
- The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high with 19.0% among symptomatic patients presenting to area hospitals in week 30.
- Of the 6,300 cases requiring hospitalization to date, almost three-quarters (72%) have been under 65 years of age, and over half reported having a chronic health condition. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19.
- Of cases requiring hospitalization who reported employment, over 80% have been critical infrastructure workers, with a broad range of affected occupational sectors, including: healthcare, transportation, food and agriculture, public works, finance, communications, clergy, first responders and other essential functions.
- Twenty-eight percent (28%) of deaths have been associated with long-term care facilities.
- 1,323 probable cases have been reported to date in Dallas County residents, including 2 probable deaths.

Figure 1. Confirmed COVID-19 positive cases by date of test collection, Dallas County: March 10 – July 31, 2020 <sup>1-4</sup>

1. Data received as of 8:00 pm yesterday, for residents of Dallas County tested with known specimen collection dates. This does include delayed results from previous days. All data are preliminary and subject to change as cases continue to be investigated.
2. Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result. The reporting lag is calculated as time from specimen collection to receipt of test results. The average reporting lag is 5.8 days, with a range from 0 – 181 days.
3. This summary graph includes only confirmed cases based on molecular amplification detection test results.
4. Bars are the number of positive molecular amplification detection tests which were collected that day.
5. Rolling 7-day average is the average number of new confirmed COVID-19 cases collected 7 days prior to value.
