As of December 11, 2020, DCHHS is reporting an additional 1,353 confirmed and 496 probable cases of 2019 novel coronavirus (COVID-19). The cumulative total number of confirmed cases in Dallas County is 141,303 including 1,315 confirmed deaths. The total probable case count is 14,922 including 52 probable deaths.

The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 49 (week ending 11/28/2020) was 1,570, which is a rate of 56.6 daily new cases per 100,000 residents.

The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with 21.6% of symptomatic patients presenting to area hospitals testing positive in week 49 (week ending 12/5/2020).

During the past 30 days, there have been 4,524 COVID-19 cases in school-aged children and staff reported from over 735 separate K-12 schools in Dallas County, including 685 staff members. Of these cases, 534 have been associated with extracurricular activities, including athletics.

There are currently 97 active long-term care facility outbreaks. Over the past 30 days, a total of 928 COVID-19 cases have been reported from these facilities, including 364 staff members. Of these cases 35 have been hospitalized, and 41 have died, including 2 deaths of staff members.

Twenty-six outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days associated with 166 cases, including 8 hospitalizations. One facility has reported 89 COVID-19 outbreak cases since October.

Of the total confirmed deaths reported to date, about 22% have been associated with long-term care facilities.

Figure 1. Confirmed COVID-19 positive cases by date of test collection, Dallas County: March 10 – December 11, 2020

1. Data received as of 8:00 pm yesterday, for residents of Dallas County tested with known specimen collection dates. This does include delayed results from previous days. All data are preliminary and subject to change as cases continue to be investigated.
2. Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result. The reporting lag is calculated as time from specimen collection to receipt of test results. The average reporting lag is 9.0 days, with a range from 0 – 126 days.
3. This summary graph includes only confirmed cases based on molecular amplification detection test results.
4. Bars are the number of positive molecular amplification detection tests which were collected that day.
5. Rolling 7-day average is the average number of new confirmed COVID-19 cases collected 7 days prior to value.
Figure 2. Cumulative confirmed COVID-19 cases by date of test collection, Dallas County: March 10 – December 11, 2020 ¹ ²

1. Data received as of 8:00 pm yesterday, for residents of Dallas County tested with known specimen collection dates. This does include delayed results from previous days. All data are preliminary and subject to change as cases continue to be investigated.

2. Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result. The reporting lag is calculated as time from specimen collection to receipt of test results. The average reporting lag is 9.0 days, with a range from 0 – 126 days.

Includes only children ages 5 to 17 years of age residing in Dallas County, with positive molecular or antigen test results received as of 8:00 pm yesterday. Does not include verbal reports of test results that are not accompanied by documentation of test results from a laboratory or testing facility. All data are preliminary and subject to change as cases continue to be investigated.
**Figure 3. Non-hospitalized and hospitalized confirmed COVID-19 cases by week of test collection, Dallas County: March 2020 through week ending December 5, 2020 (CDC Week 49)**

* Non-hospitalized includes all patients not admitted to acute-care hospitals (e.g. outpatient, urgent care, drive-through, ED-only, LTCF) and diagnosed with confirmed COVID-19. All data are preliminary and subject to change as cases continue to be received and investigated.

** Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result. The reporting lag is calculated as time from specimen collection to receipt of molecular amplification detection test results.

**Figure 4. Influenza and confirmed COVID-19 hospitalizations by week of admission, Dallas County: March 2020 through week ending December 5, 2020 (CDC Week 49)**

* Hospitalized Dallas County residents diagnosed with confirmed COVID-19 by molecular amplification detection testing. All data are preliminary and subject to change as cases continue to be received and investigated.

** Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result. The reporting lag is calculated as time from specimen collection to receipt of test results.

Data sources: National Respiratory and Enteric Virus Surveillance System and an additional subset of hospitals voluntarily reporting surveillance PCR data directly to DCHHS. Testing denominators include out-of-county patients and testing performed only through hospitals in Dallas County. (Does not include FEMA drive-thru clinics). Data are incomplete for the most recent dates.

Figure 5. SARS-CoV-2 positive PCR tests reported to DCHHS by hospital laboratories: March 22 – December 5, 2020 (CDC Weeks 26-49)¹ ²

1. Data received as of 8:00 pm yesterday. All data are preliminary and subject to change as cases continue to be received and investigated.
2. Data are incomplete for the most recent dates. Test results may be reported to DCHHS several days after the result.

* All data are preliminary and subject to change as cases continue to be received and investigated.
1 Reflects all COVID-19-associated hospitalizations and intensive care unit admissions reported from area hospitals within Dallas County by week of admission. Hospitalizations are inclusive of ICU admissions. Data are preliminary and include reports received as of 8:00 pm yesterday.
2 Probable COVID-19 deaths as defined by CSTE interim case classification criteria—meeting vital records criteria without molecular lab test confirmation.
3 Confirmed COVID-19 deaths as defined by a positive molecular amplification detection test and any of the following: (1) death certificate denotation, (2) medical record documentation of compatible symptoms and clear progression from illness to death, or (3) determination by the County Medical Examiner’s office (ME) of no alternate cause of death. Does not include possible COVID-19-associated deaths with pending determination of cause of death.

Figure 6. Confirmed COVID-19-associated deaths by week of death, Dallas County:
March 2019 through week ending December 5, 2020 (CDC Week 49)

* Dallas County residents diagnosed with confirmed COVID-19 by molecular amplification detection testing.
** All data are preliminary and subject to change as cases continue to be received and investigated.

Figure 7. Intensive care unit hospitalizations for influenza and COVID-19 by week of admission,
Dallas County: September 2019 through week ending December 5, 2020 (CDC Week 49)*

* New ICU admissions of Dallas County residents reported with confirmed COVID-19 by molecular amplification detection testing as of 8:00 pm yesterday. Hospitalized patients with self-reported residence from outside of Dallas County are not included.
** All data are preliminary and subject to change as cases continue to be received and investigated.
Figure 8. Syndromic surveillance of emergency department visits for COVID-like illness (CLI)* and Influenza-like illness (ILI)**, Dallas County: September 29, 2019 – December 5, 2020 (CDC Week 49)

ESSENCE Data is from 18 hospital emergency departments voluntarily reporting numbers of persons presenting with self-reported chief complaints.

* CLI is defined as chief complaint of fever and cough or shortness of breath or difficulty breathing.

**ILI is defined as chief complaint of fever and cough or sore throat or mention of influenza.

*Sum of confirmed and probable cases by date of test collection, for 14 day timeframe from: November 15 – November 28, 2020. Most recent 2 weeks not included due to average reporting lag of 9.0 days. Case numbers are only for portions of each city which are within Dallas County.

Many Thanks to:

Our area hospitals and healthcare providers for reporting lab-confirmed COVID-19 cases

Our DCHHS Case and Contact Investigations Team volunteers from:

Dallas County Medical Society
UT Southwestern Medical School
Texas A&M College of Medicine
UTH ealth School of Public Health
Retired School Nurses

New COVID-19 cases are reported as a daily aggregate, with this cumulative summary updated Tuesdays and Fridays.

DCHHS COVID-19 Summaries and Case Report Form are accessible at:

DCHHS Acute Communicable Disease Epidemiology Division: COVID-19@dallascounty.org
