

# Dallas County Health and Human Services Arbovirus Surveillance Report

Week 35 ending September 01, 2018

- In week 34, eleven mosquito traps tested positive for WNV in *Culex quinquefasciatus*. In week 35 to date, sixteen mosquito traps tested positive for WNV in *Culex quinquefasciatus*. Positive traps were located in the following zip codes: 75048, 75052, 75062, 75080, 75088, 75115, 75116, 75137, 75149, 75150, 75154, 75181, 75240, and 75244.
- To date, eight human WNV cases were reported in 2018. One WNV associated death was reported in 2018.
- In 2018, no travel-associated confirmed human Zika cases have been identified in Dallas County. Three pregnant women with laboratory criteria for possible Zika infection have been reported to CDC for inclusion in the US Zika Pregnancy Registry.
- *Aedes albopictus* and *Aedes aegypti* are currently circulating in the area.

\*Data for most recent 2 weeks are preliminary, and reflect results reported as of 12:30 p.m. September 04, 2018.

- All traps deployed in municipalities submitting data to DCHHS since January 1, 2018. Includes traps without mosquitoes, malfunctioning traps and traps with pending results
- Excludes traps without female *Culex quinquefasciatus* identified. Maximum of 50 female *Culex quinquefasciatus* per pool; more than 1 pool may be tested per trap
- PHL = Public health laboratory (DSHS, DCHHS) testing performed by viral culture or CDC RT-PCR protocol; IL = Testing from independent labs by alternate methods
- Average abundance of female *Culex quinquefasciatus* mosquitoes per trap night/week (excludes non-working traps)
- WNV Infection rates calculated using a Maximum Likelihood Estimation (MLE). *Biggerstaff BJ. PooledInfRate, version 4.0; Microsoft Excel Add-In; CDC 2007*
- The Vector Index (VI) reflects the MLE adjusted for *Culex quinquefasciatus* abundance.  $VI = \sum_i N_i \bar{P}_i$ , where  $N$  is the average number of *Culex quinquefasciatus* mosquitoes collected per trap night and  $\bar{P}$  is the estimated infection rate
- Human cases by week of report to health department. WNND = West Nile Neuroinvasive Disease; WNF = West Nile Fever
- All Biogents (BG) Sentinel traps deployed in municipalities submitting data to DCHHS since Week 13.
- Average abundance of *Aedes albopictus* and *Aedes aegypti* mosquitoes per night/trap in BG-Traps (excludes non-working traps)
- Human CHKV cases by week of report to health department (AT : Autochthonous case; I : imported)
- Human Dengue cases by week of report to the health department
- Confirmed and probable human Zika cases by week of specimen collection date
- Possible Zika Virus Infection Among Pregnant Women — United States and Territories, May 2016, <http://www.cdc.gov/mmwr/volumes/65/wr/mm6520e1.htm>
