<sup>\*</sup>Data for most recent 2 weeks are preliminary, and reflect results reported as of 12:30 p.m. August 9, 2021

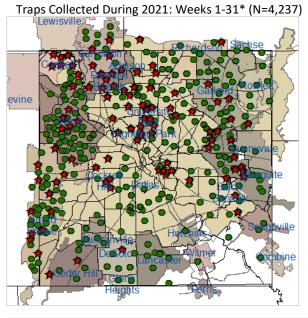

- a. All traps deployed in municipalities submitting data to DCHHS since January 1, 2020. Includes traps without mosquitoes, malfunctioning traps and traps with pending results
- b. Excludes traps without female Culex quinquefasciatus identified. Maximum of 50 female Culex quinquefasciatus per pool; more than 1 pool may be tested per trap
- c. PHL = Public health laboratory (DSHS, DCHHS) testing performed by viral culture or CDC RT-PCR protocol; IL = Testing from independent labs by alternate methods
- d. Average abundance of female Culex quinquefasciatus mosquitoes per trap night/week (excludes non-working traps)
- e. WNV Infection rates calculated using a Maximum Likelihood Estimation (MLE). Biggerstaff BJ. PooledInfRate, version 4.0; Microsoft Excel Add-In; CDC 2007
- f. The Vector Index (VI) reflects the MLE adjusted for Culex quinquefasciatus abundance. VI=  $\sum_{i=species} \overline{N}i\widehat{P}i$ , where N is the average number of Culex quinquefasciatus mosquitoes collected per trap night and  $\widehat{P}$  is the estimated infection rate
- g. Human cases by week of report to health department. WNND = West Nile Neuroinvasive Disease; WNF = West Nile Fever
- h. All Biogents (BG) Sentinel traps deployed in municipalities submitting data to DCHHS since Week 15.
- i. Average abundance of Aedes albopictus and Aedes aegypti mosquitoes per night/trap in BG-Traps (excludes non-working traps)
- j. Human CHKV cases by week of report to health department (AT : Autochthonous case; I : imported)
- k. Human Dengue cases by week of report to the health department
- I. Confirmed and probable human Zika cases by week of specimen collection date
- m. Possible Zika Virus Infection Among Pregnant Women United States and Territories, May 2016, http://www.cdc.gov/mmwr/volumes/65/wr/mm6520e1.htm/
