

Dallas County Health and Human Services 2024–2025 Influenza Surveillance Report

Week 16 ending April 19, 2025

Epidemiologic Summary

- 2.6% of Influenza tests returned positive during week 16.
- Five Influenza-associated hospitalizations were reported during week 16.
- Zero influenza-associated pediatric deaths have been reported during the 2024-2025 season in Dallas County.
- The overall school absenteeism rate was 4.4%; out of the total enrollment, 0.05% of absences were attributed to influenza-like illness during week 16 of schools reporting within Dallas County.
- 1.7% of RSV tests returned positive during week 16.

Positive influenza A tests ²	188	83	61	16	8	10	11,043
Positive influenza B tests	55	40	43	24	7	11	668

1 Includes positive rapid antigen, PCR, DFA, or culture results

2 Further subtyping is performed only by select hospital laboratories for specimens referred to DCHHS by institutions for PCR-testing

3 Non-differentiated refers to rapid test results which did not differentiate between influenza A and B

¹ DCHHS LRN laboratory PCR testing of designated Dallas County surveillance site isolates; counts may not sum to total as samples can test positive for multiple subtypes² DSHS 2024–2025 Texas Influenza Surveillance Information Activity Report available at <https://www.dshs.texas.gov/texas-respiratory-virus-surveillance-report>³ CDC FluView Weekly Influenza Surveillance Report available at <https://www.cdc.gov/fluview/>

*This data reflects specimens tested and the number determined to be positive for influenza viruses at the public health labs (specimens tested is not the same as cases). It does not reflect specimens tested only at CDC and could include more than one specimen tested per person. The guidance for influenza A/H5 testing recommends testing both a conjunctival and respiratory swab for people with conjunctivitis which has resulted in more specimens testing positive for influenza A/H5 than the number of human H5 cases.
