

Dallas County Health and Human Services 2024–2025 Influenza Surveillance Report

Week 7 ending February 15, 2025

Epidemiologic Summary

- 23.8% of Influenza tests returned positive during week 7.
- One-hundred and thirty-nine Influenza-associated hospitalizations were reported during week 7.
- Zero influenza-associated pediatric deaths have been reported during the 2024-2025 season in Dallas County.
- The overall school absenteeism rate was 5.7%; out of the total enrollment, 0.2% of absences were attributed to influenza-like illness during week 7 of schools reporting within Dallas County.
- 4.8% of RSV tests returned positive during week 7.

¹ DCHHS LRN laboratory PCR testing of designated Dallas County surveillance site isolates; counts may not sum to total as samples can test positive for multiple subtypes² DSHS 2024–2025 Texas Influenza Surveillance Information Activity Report available at <https://www.dshs.texas.gov/texas-respiratory-virus-surveillance-report>³ CDC FluView Weekly Influenza Surveillance Report available at <https://www.cdc.gov/fluview/>

*This data reflects specimens tested and the number determined to be positive for influenza viruses at the public health labs (specimens tested is not the same as cases). It does not reflect specimens tested only at CDC and could include more than one specimen tested per person. The guidance for influenza A/H5 testing recommends testing both a conjunctival and respiratory swab for people with conjunctivitis which has resulted in more specimens testing positive for influenza A/H5 than the number of human H5 cases.
