- Includes positive rapid antigen, PCR, DFA, or culture results.
- Further subtyping is performed only by select hospital laboratories for specimens referred to DCHHS by institutions for PCR-testing.
- Non-differentiated refers to rapid test results which did not differentiate between influenza A and B.

- *This data reflects specimens tested and the number determined to be positive for influenza viruses at the public health labs (specimens tested is not the same as cases). It does not reflect specimens tested only at CDC and could include more than one specimen tested per person. The guidance for influenza A/H5 testing recommends testing both a conjunctival and respiratory swab for people with conjunctivitis which has resulted in more specimens testing positive for influenza A/H5 than the number of human H5 cases.
