## Epidemiologic Summary

- 2.6% of Influenza tests returned positive during week 13.
- Six influenza-associated hospitalizations were reported during week 13.
- Zero influenza-associated pediatric deaths have been reported during the 2025-2026 season in Dallas County.
- 6.3% of RSV tests returned positive during week 13.

Syndromic Surveillance of Emergency Department Visits for Influenza-like Illness (ILI), Dallas County

Data source: 18 emergency departments in Dallas County hospitals participating in the Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE) voluntarily reporting the numbers of persons presenting with self-reported chief complaints of ILI.

- Includes positive rapid antigen, PCR, DFA, or culture results.
- Further subtyping is performed only by select hospital laboratories for specimens referred to DCHHS by institutions for PCR-testing.
- Non-differentiated refers to rapid test results which did not differentiate between influenza A and B.

- DCHHS LRN laboratory PCR testing of designated Dallas County surveillance site isolates; counts may not sum to total as samples can test positive for multiple subtypes
- DSHS 2024–2025 Texas Influenza Surveillance Information Activity Report available at <https://www.dshs.texas.gov/texas-respiratory-virus-surveillance-report>
- CDC FluView Weekly Influenza Surveillance Report available at <https://www.cdc.gov/fluview/>
- \*This data reflects specimens tested and the number determined to be positive for influenza viruses at the public health labs (specimens tested is not the same as cases). It does not reflect specimens tested only at CDC and could include more than one specimen tested per person. The guidance for influenza A/H5 testing recommends testing both a conjunctival and respiratory swab for people with conjunctivitis which has resulted in more specimens testing positive for influenza A/H5 than the number of human H5 cases.
