**FOR IMMEDIATE RELEASE**

## DCHHS reports tenth human case of West Nile Virus this year

**DALLAS (September 25, 2018)** – Dallas County Health and Human Services (DCHHS) is reporting the tenth human case of West Nile Virus (WNV) infection in Dallas County for 2018. The patient is a resident of the 75038 zip code in Irving and has been diagnosed with West Nile Fever illness. The announcement comes shortly after DCHHS confirmed the first WNV death of the year. For medical confidentiality and personal privacy reasons, DCHHS does not provide additional identifying information.

“Controlling an epidemic of WNV infection is a community effort that calls upon residents to take preventative measures to reduce exposure,” said Ganesh Shivaramaier, DCHHS interim director. “Dallas County Health and Human Services not only conducts active surveillance to detect WNV and monitor infection rates locally but also educates the community to take preventative action.”

This season, mosquito samples have tested positive for WNV in the cities of Addison, Balch Springs, Carrollton, Cedar Hill, Coppell, Dallas, Desoto, Duncanville, Farmers Branch, Garland, Glenn Heights, Highland Park, Irving, Mesquite, Richardson, Rowlett, Sachse, Seagoville and University Park.

The best way to avoid exposure to West Nile virus is to avoid mosquito bites. Residents should use the 4Ds to reduce their risk:

- **DEET:** All Day, Every Day: Whenever you’re outside, use insect repellents that contain DEET or other EPA approved repellents and follow instructions.
- **Dress:** Wear long, loose, and light-colored clothing outside.
- **Drain:** Drain or treat all standing water in and around your home or workplace.
- **Dusk & Dawn:** Limit outdoor activities during dusk and dawn when mosquitoes are most active.

WNV is a disease that is spread by the bite of an infected mosquito. Mosquitoes can become infected when they feed on the blood from infected birds. The infected mosquitoes can then transmit WNV to humans and animals. Severe WNV infections can cause neurologic complications such as encephalitis. Milder symptoms include fever, headache and muscle aches. There is no vaccine or specific treatment for WNV.

For more information on mosquito prevention follow DCHHS on Facebook and Twitter or go to: [www.dallascounty.org/departments/hhs/mosquito\\_prevention.html](http://www.dallascounty.org/departments/hhs/mosquito_prevention.html).
