

Dallas HSDA

Dallas HSDA Counties: Collin, Dallas, Denton, Ellis, Hunt, Kaufman, Navarro, and Rockwall

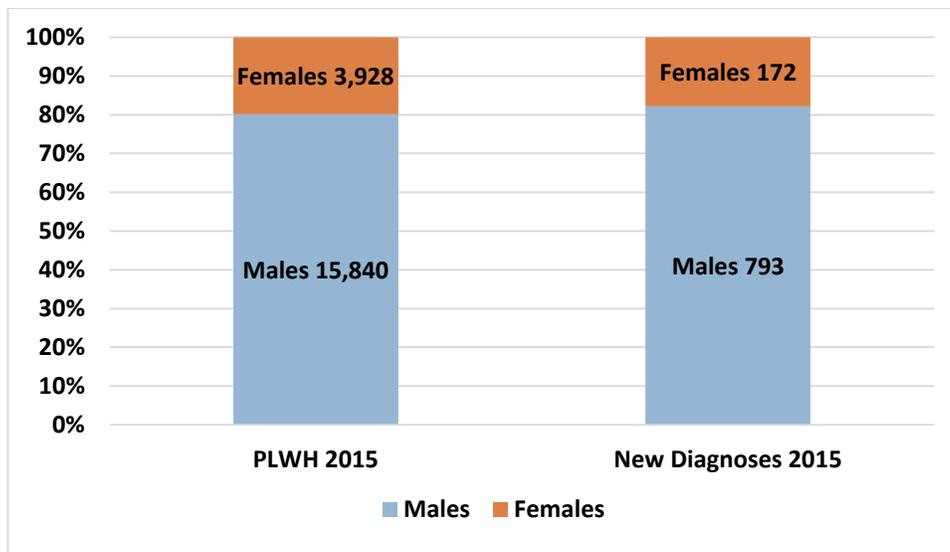

Epi Profile

In the Dallas HSDA, the number of new diagnoses has remained flat and stable for the past several years.

There were **21,044 people living with HIV (PLWH)** in this area as of the end of 2016. This includes only people with diagnosed infections with a current address in this area. People with undiagnosed HIV are not included. In 2016, **981 people were newly diagnosed with HIV.**

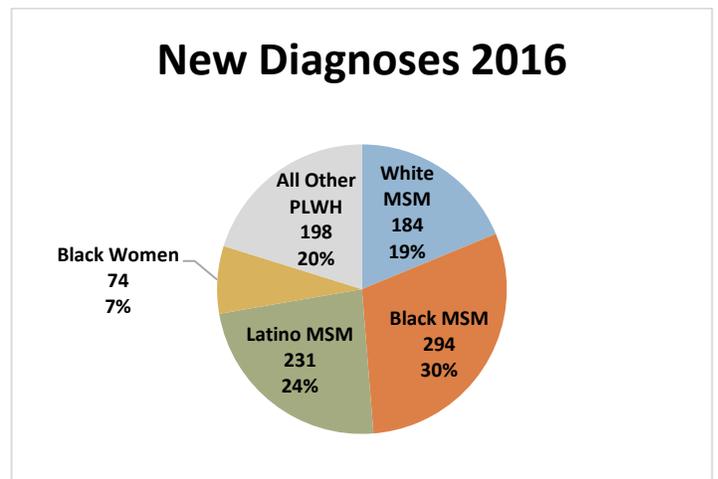

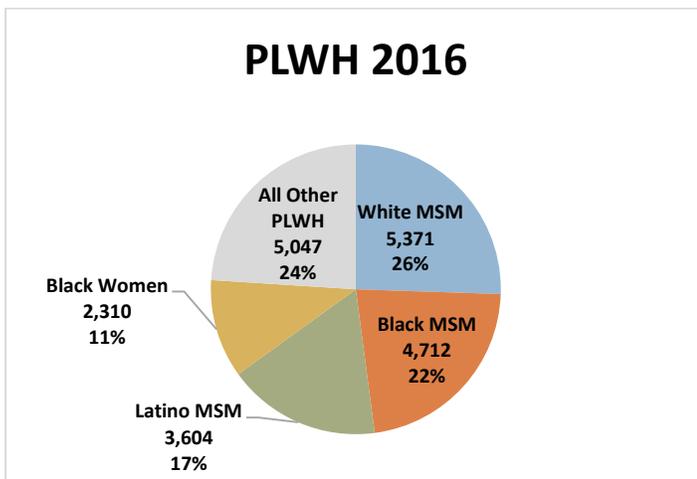

Gender

Men make up the majority of PLWH and the majority of new diagnoses.

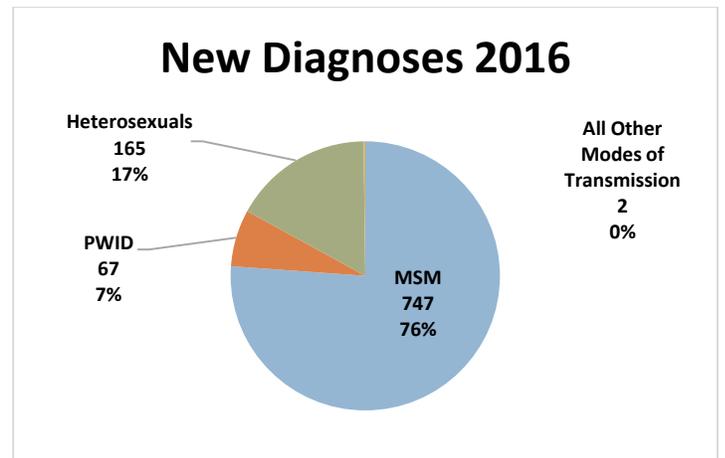

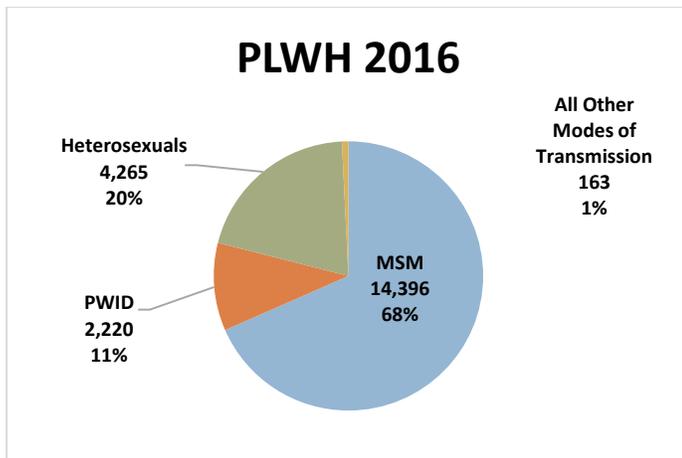

Priority Populations (76% of total PLWH, 80% of new diagnoses)

Priority populations make up the majority of PLWH and the majority of new diagnoses. White MSM are the largest priority population among PLWH and Black MSM are the largest priority population among new diagnoses.

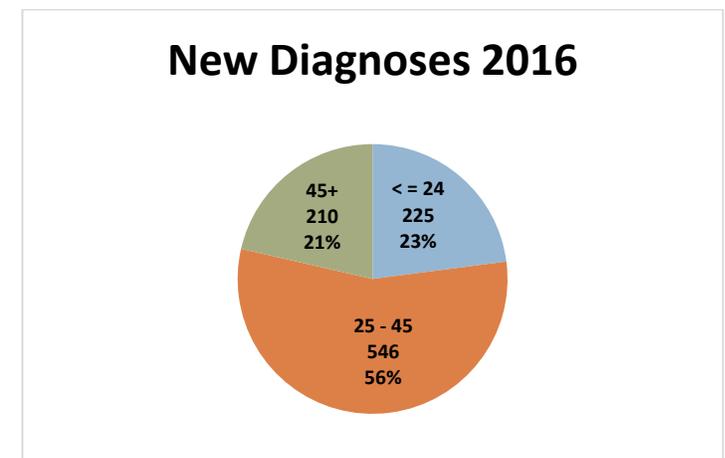

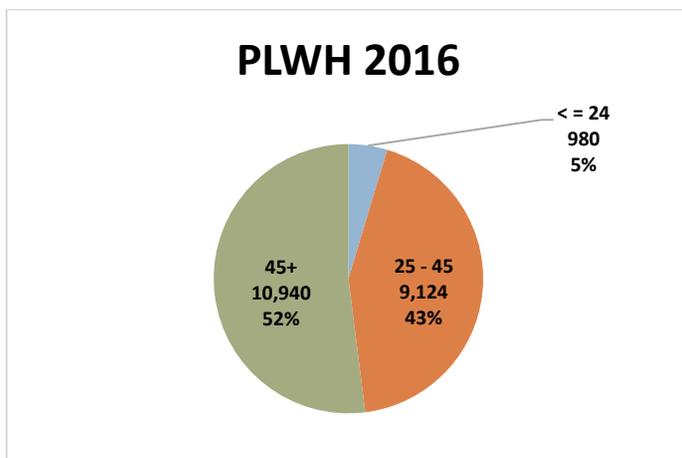

Mode of Exposure

MSM makes up the primary mode of exposure among PLWH and among new diagnoses.

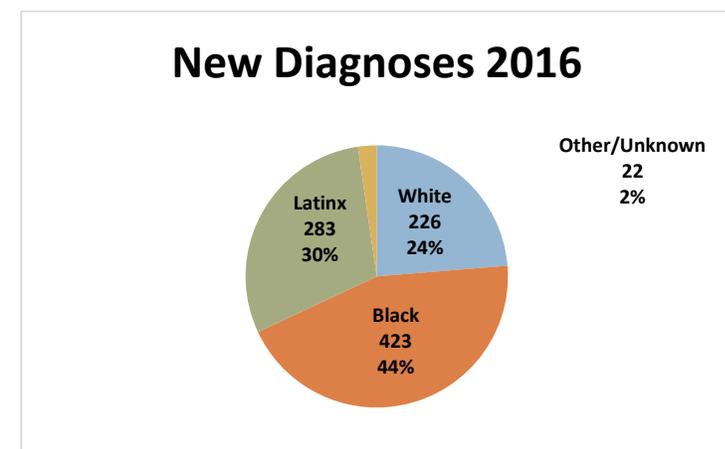

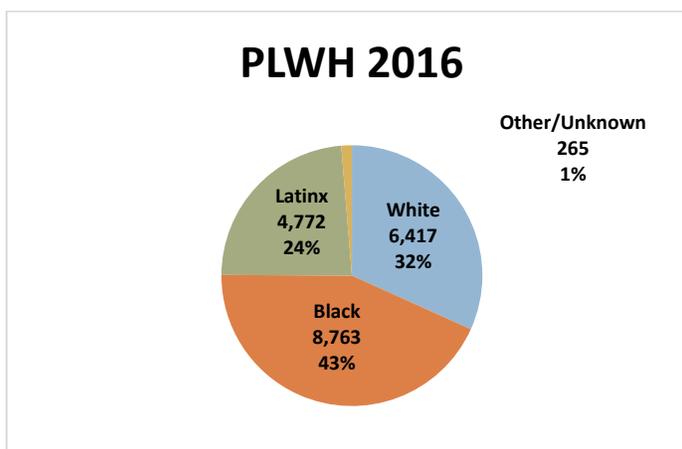

Age

The majority of PLWH are 45 and older; the majority of new diagnoses are among people 25-45.

Race/Ethnicity

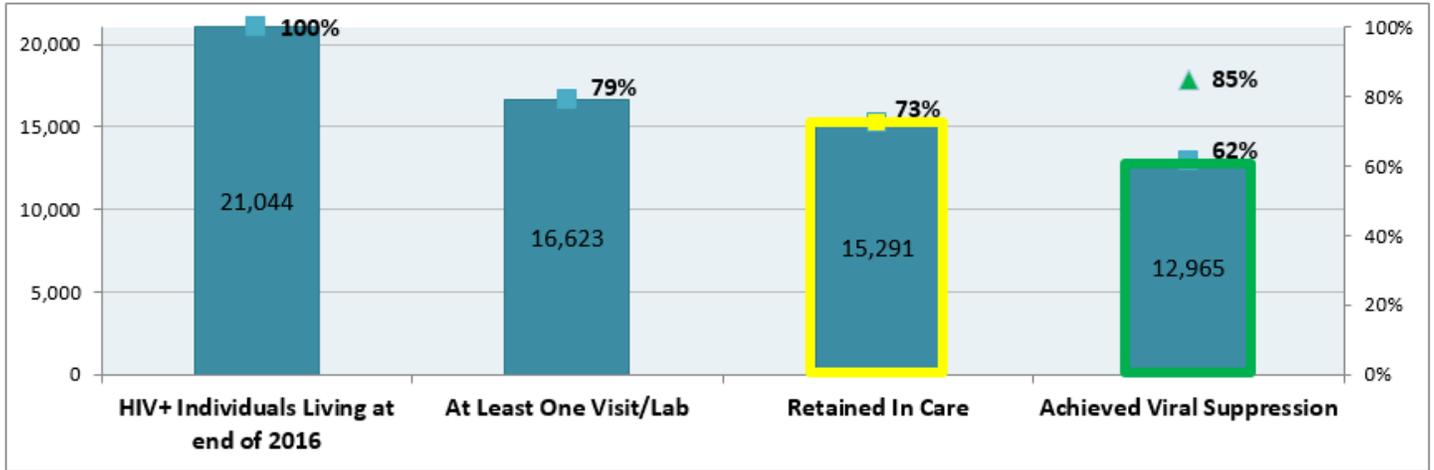

The majority of PLWH and the majority of new diagnoses are among Black individuals.

2016 Care Continuum

When people are able to achieve retention in care, they are able to achieve viral suppression. In the Dallas HSDA, 62% of total PLWH have achieved viral suppression, and 85% of PLWH who are retained in care achieved viral suppression. Retention in care is a priority area.

Dallas HSDA HIV Population Treatment Cascade, 2016

79% of PLWH had at least one episode of HIV care & treatment. This means roughly 8 out of 10 PLWH were in care.

73% of PLWH were retained in care (2 episodes of HIV care & treatment across the year). This means that roughly 7 out of 10 PLWH were retained in care

62% of PLWH were virally suppressed. This means that roughly 6 out of 10 PLWH were virally suppressed

Of those 7 out of 10 PLWH who were retained in care, 85%, or roughly 6 of those 7 PLWH, were virally suppressed.

2016 Continuum of Care, Parity Table

All communities who are retained in care are able to achieve viral suppression goals, except for people under the age of 35 and People Who Inject Drugs (PWID).

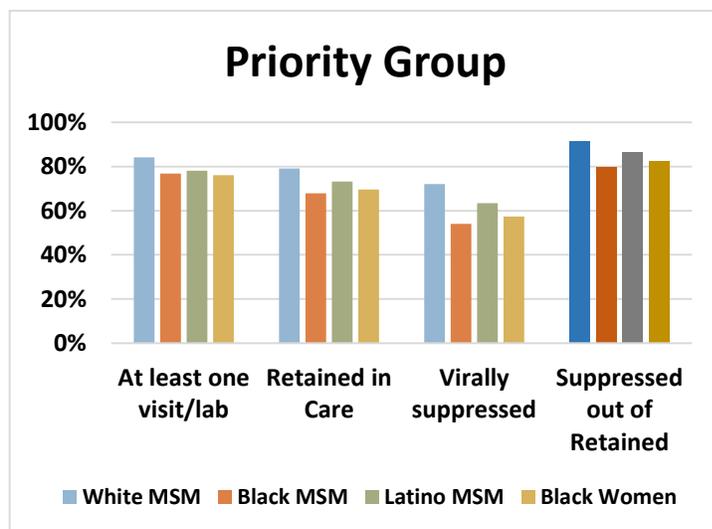

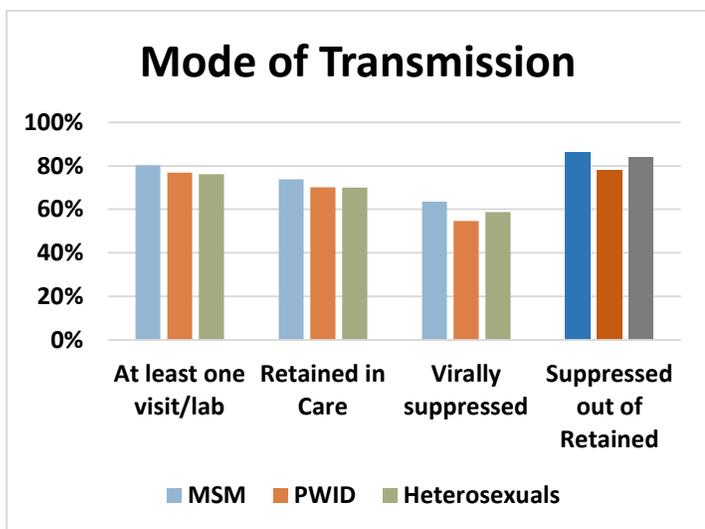

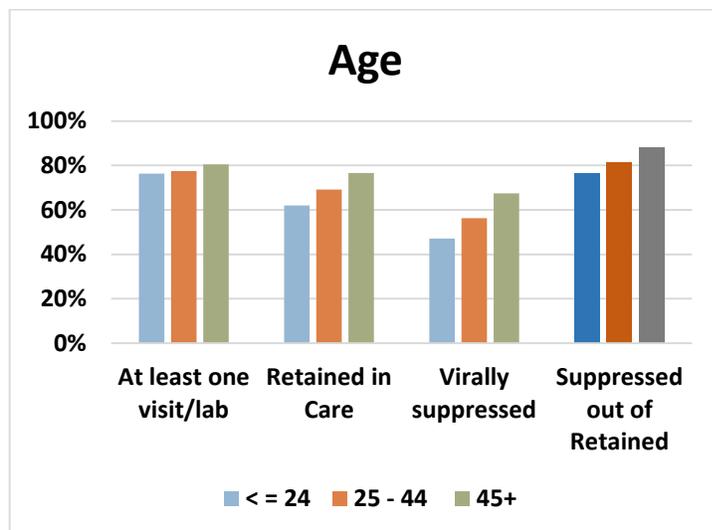

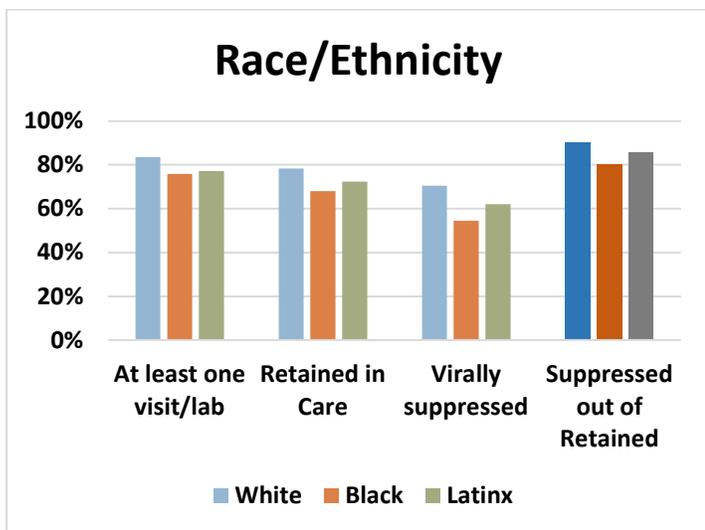

Communities with the fewest opportunities to achieve retention are people under the age of 35, and Black PLWH, specifically Black MSM.
